Ibuprofen Side Effects Center

Pharmacy Editor: Melissa Conrad Stöppler, MD

What Is Motrin (Ibuprofen)?

Motrin (ibuprofen) is a nonsteroidal anti-inflammatory drug (NSAID) indicated for relief of the signs and symptoms of rheumatoid arthritis and osteoarthritis, for relief of mild to moderate pain, and for treatment of primary dysmenorrhea. A generic formulation is available.

What Are Side Effects of Motrin (Ibuprofen)

Side effects of Motrin include:

- stomach pain,
- constipation,
- diarrhea,
- bloating,
- gas,
- heartburn,
- nausea,
- vomiting,
- dizziness,
- headache,

- nervousness,
- skin itching or rash,
- blurred vision, or
- ringing in the ears.

Other side effects of Motrin may occur. Consult your physician if you experience any possible side effects of Motrin.

Dosage for Motrin (Ibuprofen)

The recommended dose of Motrin should be adjusted to suit individual patients needs but should not exceed 3200 mg in the total daily dose.

Motrin (Ibuprofen) In Children

Safe use of Motrin for use by children has not been established.

Motrin (Ibuprofen) and Pregnancy

It is not known whether ibuprofen is harmful to an unborn baby. However, taking ibuprofen during the last 3 months of pregnancy may result in birth defects. It is also not known whether ibuprofen passes into breast milk or if it could harm a nursing baby.

Additional Information

Our Motrin Side Effects Drug Center provides a comprehensive view of available drug information on the potential side effects when taking this medication.

This is not a complete list of side effects and others may occur. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

Get emergency medical help if you have **signs of an allergic reaction** (hives, difficult breathing, swelling in your face or throat) **or a severe skin reaction** (fever, sore throat, burning eyes, skin pain, red or purple skin rash with blistering and peeling).

Get emergency medical help if you have **signs of a heart attack or stroke**: chest pain spreading to your jaw or shoulder, sudden numbness or weakness on one side of the body, slurred speech, leg swelling, feeling short of breath.

Stop using ibuprofen and call your doctor at once if you have:

- changes in your vision;

- shortness of breath (even with mild exertion);
- swelling or rapid weight gain;
- a skin rash, no matter how mild;
- **signs of stomach bleeding**--bloody or tarry stools, coughing up blood or vomit that looks like coffee grounds;
- **liver problems**--nausea, upper stomach pain, itching, tired feeling, flu-like symptoms, loss of appetite, dark urine, clay-colored stools, jaundice (yellowing of the skin or eyes);
- **low red blood cells (anemia)**--pale skin, feeling light-headed or short of breath, rapid heart rate, trouble concentrating; or
- **kidney problems**--little or no urinating, painful or difficult urination, swelling in your feet or ankles, feeling tired or short of breath.

Common side effects may include:

- nausea, vomiting, gas;
- bleeding; or
- dizziness, headache.

This is not a complete list of side effects and others may occur. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.
